

FlexRite™

"Now Available"

EHH

...Electrically Heat Traced Hose Assemblies.

EHH is custom manufactured for a variety of applications to keep product flowing. The multi-strand heating element is comprised of a strong nickel alloy, providing maximum resistance to flexing while offering a large heated surface area (95%) for optimal heat transfer. **EHH** can be designed for use with a

thermostat to control temperature, or it can be self-regulating.

EHH is designed to match the electrical characteristics (voltage, phase, or power) determined by a completed questionnaire. A variety of wiring options, temperature sensors, controllers, and control methods are available.

Applications:

- Chemical Transfer
- Paper Mills
- Packaging Industry
- Photographic Development Solutions
- Gel cap production
- Glue
- Cosmetics
- Automotive

Please contact us to to discuss your specific application.
